

**SEAT BELT WEBBING AND METHOD OF DYEING SAME**

Abstract

- 5        A process of dyeing a seat belt within a dye range,  
the seat belt comprising a woven polyester material  
containing a blended hybrid fiber of the type known as  
PET-polycaprolactone diblock copolymer fiber, the  
process comprising the steps of: heating the webbing to  
10    a preferred range while under tension and subsequently  
washing, steaming, finish coating and drying the  
webbing.
